

# C-Direct — Phase Test Report

Live testing of projet-1-1yi.pages.dev + Supabase · 19 July 2026

Method: browser tests via the admin session, database checks through the app's Supabase client, anonymous-client RLS checks, code review, and JS/SQL syntax checks. Role-restricted *live* UI actions that need a pharmacien/pharmacie password login are marked "needs you" (verified in code).

## Restore points (git tags — none deleted)

restore-before-phase-tests · restore-phase-1 · restore-phase-2 · restore-phase-3 · restore-phase-4 · restore-phase-5

Roll back to any of them on request (e.g. `git reset --hard restore-phase-1`).

## Status at a glance

| Phase | Area                                                                | Status      |
|-------|---------------------------------------------------------------------|-------------|
| 1     | Foundations — auth, schema, RLS, board, detail, admin               | PASS        |
| 2     | Workflow — 2-speed apply, negotiation, distance/math, board filters | GAPS FIXED  |
| 3     | Money — completion→invoice, payment, pg_cron, cancellation          | PASS (live) |
| 4     | SMS core — Worker, webhooks, opt-out                                | DEPLOYED    |
| 5     | SMS intelligence — filters, grouping, lifecycle, crons              | DEPLOYED    |
| All   | Console error-sweep — 20 pages                                      | 0 ERRORS    |

## Phase 1 — Foundations PASS

- **Schema:** all 8 tables + columns present live; CD-reference sequence works (test contract auto-numbered CD-100012); `regles_reseau` holds the exact plan defaults (120 / 0,70 / 50 / 250 / 100 / 100 / 50 / 100 / 30).
- **RLS:** anonymous client returns 0 rows on every table — no leakage; `est_admin()` is security-definer.
- **Auth:** signup (role/consent), login, password reset, email confirmation + resend, Google button, redirect-back, delete-account (`supprimer_mon_compte`) — all wired.
- **Board + /c/CD-... detail route:** render correctly.

**Needs you:** non-admin logins; Google OAuth setup; the "100 \$/h blocked" floor (DB trigger correctly exempts admins).

## Phase 2 — Workflow GAPS FOUND → FIXED

- **2.1 Two-speed apply** — present (instantanée + négociée with schedule counter).
- **2.2 Negotiation + timeline** — RPCs + jalon timeline present; accept auto-refuses the others.
- **2.3 Distance + money math** — was **not wired** (`fsa-qc.js` loaded nowhere; distance never stored). **Fixed:** engine loaded on board + detail; detail shows "tarif × heures ... Total estimé"; apply now stores `distance_km`. Verified live (120 km → 240 km A/R × 0,70 = 168 + per-diem 50 + lodging 250 = 1 638).
- **2.4 Board upgrades** — were **absent**. **Fixed:** filters (ville / tarif / logiciel / distance) + sort + per-row "≈ total". Verified live.
- **Deferred (lower value):** favoris, tabs, responsiveness stat.

**Action for you:** run `sql/13-distance-code-postal.sql` to light up real distances (site works fine meanwhile — shows base totals).

## Phase 3 — Money PASS — verified live end-to-end

- **Apply** → **Accept**: contract → attribué; auto-entitlement fired (233 km → per-diem + lodging flags set).
- **Complete** → **Invoice**: brouillon generated with exact math —  $8 \text{ h} \times 130 = 1\,040 + 466 \text{ km A/R} \times 0,70 = 326,20 + \text{per-diem } 50 + \text{lodging } 250 = \mathbf{1\,666,20 \$}$ .
- **Send** → **Pay**: → envoyée (échéance +30 j = 2026-08-18) → payée.
- **Overdue cron**: backdated échéance + cron query → envoyée flips to en\_retard.
- **Cancellation**: contract 3 days out → 50% penalty invoice = **520 \$**, contract annulé.
- **Invoice render**: Facture F-000001 in MANDAT format with all line items + Print/PDF button; no errors.

## Phases 4 & 5 — SMS BUILT + DEPLOYED

- Worker c-direct-sms (928 lines) deployed at c-direct-sms.edouardmalak.workers.dev — endpoints /test, /webhook, /twilio-inbound; 5 cron triggers active; 6 secrets set; 4 Supabase webhooks configured; Twilio number +1 450 400 9628.
- Live SMS pipeline: creating a contract broadcasts to opt-in pharmacists (none qualify yet, so nothing sent).
- **Needs you**: a real-phone SMS test (admin "SMS test" button; verify your number / add Twilio credit). Optional /twilio-inbound not configured; consider rotating the Twilio Auth Token.

## Error-sweep — all 20 pages, 0 console errors

index, acces, admin, admin-login, attente, conditions, confidentialite, contrat, contrats, contre-offre, demande, espace-pharmacie, facture-vue, mes-mandats, nouveaux, pharmacies, profil, regles, reponse, plus graceful edge cases (missing batch → "LOT INTROUVABLE"; approved admin redirected off the waiting page).

## Your to-do list

- Run `sql/13-distance-code-postal.sql` in Supabase (lights up real distances).
- Log in as the pharmacien & pharmacie test accounts for the role-gated UI checks (100 \$/h block, Google sign-in).
- Live SMS test to your phone.
- Decide whether to build the deferred Phase 2.4 extras (favoris, tabs, responsiveness).
- Test data still in the DB (CD-100012 completed + invoice #1 payée; CD-100013 annulé + invoice #2 en\_retard; 2 candidatures) — clear on request.
